### Continental unleashes MG-Series 200-G hard-mount washer line

Oshkosh, Wis.-- Continental Girbau recently unleashed the new MG-Series hard-mount washer-extractors, available in 40- and 55-pound capacities. Continental's highest performing hard-mount washers, MG-Series Washers feature up to 200 G-force extract speeds, superior energy-efficiency, advanced programmability, and unrivaled durability.

The new MG-Series Washers – perfectly suited for an array of on-premise laundry facilities – are engineered to cut utilities and labor, while drastically boosting productivity. Unlike many other hard-mount washers on the market, which typically produce extract speeds between 70 and 120-G-force, MG-Series generates speeds of 200 G-force.

In addition to the new 200 G-force MG Series hard-mount line, Continental offers a full array of washers for on-premise laundries, including the unmatched E-Series freestanding line with extract speeds of up to 387 G-force; the 141 G-force M-Series hard-mount line; and the 131 G-force L-Series hard-mount line.

By generating more than double the G-force of many hard-mount washers, MG-Series Washers remove considerably more water from each load. This reduces dry-time and natural gas consumption – cutting utility costs, and simultaneously, improves laundry productivity. “With higher extract speeds, laundry can be processed more quickly – saving time, energy, and labor,” said Joel Jorgensen, Continental vice president of sales and customer services.

MG-Series Washers are built to mimic our high-performance E-Series Washers,” he added. “Many of the shared components result in a hard-mount washer with unrivaled energy-efficiency. Superior programmability using the washer’s Logi-Pro Control means laundries can properly clean a variety of soil levels and fabrics, including silk, NOMEX, GORTEX, suede, wool, linen and denim.”

The MG-Series line comes equipped with the Logi Pro Control, which offers up to 25 individually modifiable programs – each with up to 11 baths, including multiple pre-wash, wash

and rinse phases to create the most efficient customized cycles. The Logi Pro delivers up to six programmable water levels; a delayed start and rinse option; overnight soak; variable wash action; programmable extract speeds, including zero rotation; temperature controlled fill up to 194 degrees; and timed chemical dosing by the second.

“Using the Logi Pro Control, wash parameters are programmable to ensure optimum efficiency and results,” said Jorgensen. “MG-Series washers also have many unique features that offer laundries unmatched flexibility.”

The Logi Pro Control, for example, incorporates a water and chemical adjustment feature. The user simply selects the size of the load – ¼ load, ½ load, ¾ load or full load. The control will automatically adjust the amount of water and chemicals according to the selected load size – a feature that saves valuable water and chemicals!

Also key to laundry productivity are the Rinse Hold and Delay Start functions. Rinse Hold halts final rinse cycle, leaving the load to soak for added stain removal; while the Delay function allows the machine to start at a specific time of the day or night to bolster laundry productivity during hours where utilities are less costly or attendants are not present.

Moreover, MG-Series Washers are stingy on water thanks to exclusive features and a sump-less design. Engineered without a sump – a water containment area at the base of the washer – MG-Series Washers save up to three gallons of water with each fill when compared to machines equipped with an outer tub sump. This cuts water-usage and water-heating costs. With AquaFall™, an exclusive system that releases water into the drum through holes in the drum lifters, MG-Series Washers also boast superior load saturation, chemical penetration and rinsing – adding up to a superior clean!

Like all Continental products, MG-Series Washers are designed for durability and longevity. They feature inner and outer drums made of AISI-304 stainless steel, oversized bearings and a quality sealing system. The machine components are engineered to use as few welds as possible – delivering unrivaled strength. The ergonomically designed oversized door allows for easy loading and unloading.

MG-Series hard-mount washer-extractors are backed by an industry-leading 5/3-year factory warranty.

Continental Girbau, Inc. is the largest of 12 subsidiaries of the Girbau Group, based in Vic, Spain. Girbau laundry products – marketed throughout 90 countries worldwide – meet

rigorous environmental and safety standards established by the International Organization for Standardization (ISO). Girbau S.A. holds both ISO9001 and ISO14001 certifications. Ever focused on laundry efficiency, Continental Girbau is a member of the U.S. Green Building Council (USGB), a 501(c)(3) nonprofit that developed the Leadership in Energy and Environmental Design (LEED) Green Building Rating System.
